

TYLER SPRINGS STAGE 3

Background

Having completed stage 2 of the works, VALMEC tendered and won the work to complete the next stage of the subdivision. This was a fully serviced subdivision involving demolition and earthworks (including substantial imported fill), retaining walls and fencing, underground services, road works and electrical reticulation.

Challenges

Dust managed to be the major challenge with an action hot line being set up to manage interaction between the adjacent neighbours and a VALMEC response team. Additional water carts were active on the site for the duration of the works. VALMEC maintained a presence long after the completion of the works to ensure that hydro mulching was effective.

Advantage

This project was won with the combination of competitive pricing and depth of experience. The client had first-hand experience of VALMEC's performance on an earlier stage making the choice to use the same contractor easier.

Client

DC Tyler

Location

Perth, Western Australia

Scope of Work

Complete subdivision works including:

- > Imported fill;
- > Retaining walls;
- > Bulk earthworks;
- > Underground services; and
- > Roadworks

Delivery Time
